

IN THE CLAIMS

Please amend the claims as follows:

1. A rewritable optical record carrier comprising a substrate carrying a first recording stack of layers, which first recording stack comprises, in this order or in reverse order,
 - a first dielectric layer,
 - a recording layer comprising a phase-change recording material,
 - a second dielectric layer, and
 - a mirror layer, composed of a mixture comprising aluminum as a main component or composed of a mixture comprising silver as a main component,characterized in that said first dielectric layer has a thickness d_1 in the range of 100 nm to 200 nm, and said second dielectric layer has a thickness d_2 according to one of the following relations
 - a) when the mirror layer comprises aluminum
$$0.0225*d_2^2 - 2.6572*d_2 + 173.3 \text{ (nm)} < d_1 < 0.0225*d_2^2 - 2.6572*d_2 + 213.3 \text{ (nm)}$$
 - b) when the mirror layer comprises silver
$$0.0191*d_2^2 - 2.0482*d_2 + 149.6 \text{ (nm)} < d_1 < 0.0191*d_2^2 - 2.0482*d_2 + 189.6 \text{ (nm)} .$$

2. A rewritable optical record carrier according to claim 1, characterized in that said second dielectric layer has a thickness in the range of 20 nm to 50 nm.

3. A rewritable optical record carrier according to claim 2, characterized in that said first dielectric layer has a thickness in the range of 110 nm to 150 nm, and said second dielectric layer has a thickness in the range of 25 nm to 40 nm.

4. A rewritable optical record carrier according to claim 3, characterized in that said first and second dielectric layers comprise a mixture of ZnS and SiO₂.

5. A rewritable optical record carrier according to claim 4, characterized in that said phase-change recording material comprises a mixture of Ge, In, Sb, and Te and that said recording layer has a thickness in the range of 12 ± 1.5 nm.

6. A rewritable optical record carrier according to any of the claims 1 to 5 claim 1,
characterized in that it further comprises

- a spacer layer attached to said first dielectric layer, and
- a second recording stack deposited on said spacer layer.

7. A rewritable optical record carrier according to any of
~~the claims 1 to 5~~claim 1,

characterized in that it further comprises a dummy substrate
disposed onto the first dielectric layer.
